

## Data Mapping & Gap Analysis

An organization's success is tied to the security of its data. A solid security plan must include a privacy review to map the flow of data within your organization and its subsidiaries/suppliers, and to conduct gap analyses to identify the areas of greatest risk to your data's security.

Data mapping and gap analyses are critical to the development of robust crisis management plans, something every organization should develop and maintain to mitigate damages and to adequately liaise with regulators in the event of a cybersecurity incident. Data Mapping and gap analysis also enable building strong policy compliance frameworks, which accurately reflect data flows within and outside the organization.

Our skilled Privacy and Data Protection Group can translate the information gleaned from data mapping and gap analyses into enterprise-wide policies and procedures to maximize efficiencies in data transfer and minimize the risk of a data breach.
